ABSTRACT OF THE DISCLOSURE

Point-to-point or point-to-multipoint communications
are established based on a database query broadcast to
all stations. Stations satisfying the query respond and
communications are established with the station(s)
responding. The database query is preferably directed to
location, status or history of the station being queried.
Responding stations may be displayed on a moving map and
establishing communications with a responding station can
be established by touching an icon of the station on a
touch screen display.
